

HVO Analytical Identity Summary

Prepared by: Portland Fuel Ltd | Date: 30 April 2026 | Prepared for: UK REACH Article 26 Inquiry submission — Section 1.4 Analytical Information

1. Substance Identification

Field	Value
Substance name	Renewable hydrocarbons (diesel type fraction)
Common name	HVO (Hydrotreated Vegetable Oil)
EC Number	700-571-2
CAS Number	928771-01-1
Substance type	UVCB
Existing UK REACH registration	UK-01-9638319484-0-0004

2. Analytical Method

Field	Value
Analysis type	Gas chromatography (GC)
Purpose	Identification and quantification of constituent hydrocarbon groups
Source of analytical data	Phillips 66 Renewable Diesel Safety Data Sheet (February 2024)

3. Analytical Results — Key Findings

The following results are drawn from the Phillips 66 Renewable Diesel Safety Data Sheet (February 2024), which contains GC chromatographic analysis of the substance.

Parameter	Result
Predominant hydrocarbon composition	C15–C18 normal and iso-paraffinic hydrocarbons
n-Alkanes (normal paraffins, C15–C18)	30–70% w/w (typical 50% w/w)
iso-Alkanes (branched paraffins, C15–C18)	25–65% w/w (typical 45% w/w)
Total aromatics	< 1.0% w/w
Sulphur content	< 1 mg/kg
FAME content (fatty acid methyl esters)	Zero
Oxygen content	Zero

These results are consistent with the boundary composition defined in Section 1.2 of this dossier and confirm the identity of the substance as EC 700-571-2.

4. Status of Full Analytical Package

Portland Fuel Ltd is a prospective registrant submitting this dossier as an Article 26 Inquiry prior to registration. The full analytical package, including raw GC data and

method validation records, is held by the Lead Registrant of UK REACH registration UK-01-9638319484-0-0004.

Portland Fuel Ltd will obtain access to this data via a Letter of Access upon joining the existing registrant consortium following the outcome of this inquiry. The supplier SDS data summarised above is sufficient to confirm substance identity for the purpose of this inquiry submission.

5. Declaration

I confirm that the analytical information summarised in this document accurately reflects the identity of the substance as imported and used by Portland Fuel Ltd.
