

IUCLID 6 — Article 26 Inquiry: Step-by-Step Guide

Substance: HVO (Renewable hydrocarbons, diesel type fraction) **EC Number:** 700-571-2 | **CAS Number:** 928771-01-1
Company: Portland Fuel Ltd **Prepared:** 2026-04-20

This guide covers the complete process from logging into IUCLID 6 Cloud to exporting a validated .i6z inquiry dossier ready for submission to HSE. All field values are pre-filled for HVO.

Before You Start — Checklist

- [] IUCLID 6 Cloud account created at iuclid6.echa.europa.eu
- [] You know Portland Fuel's registered company name, address and your contact details
- [] You are in the correct Working Context: **UK REACH** (not ECHA/EU REACH)

Part 1 — Log In and Set Working Context

1.1 Log In

1. Go to iuclid6.echa.europa.eu
2. Sign in with your ECHA account email and password

1.2 Set Working Context to UK REACH

This is the most commonly missed step — if the context is wrong, the Inquiry dossier type will not be available.

1. Look at the **top-right corner** of the screen after logging in
2. You will see a dropdown or label showing the current working context (it may say "ECHA" or be blank)
3. Click it and select "**UK REACH**"
4. The screen header should update to confirm UK REACH context

If you do not see UK REACH as an option, your account may not have the UK REACH workspace activated.
Contact ukreachsupport@defra.gov.uk.

Part 2 — Create the Legal Entity

The Legal Entity is Portland Fuel's company record in IUCLID. It must exist before you can create a dossier.

2.1 Navigate to Legal Entities

1. From the main menu (left sidebar or hamburger menu), click **Legal Entities**
2. Check whether Portland Fuel already exists — if it does, click on it and verify the details are correct, then skip to Part 3
3. If it does not exist, click + **New** or **Create Legal Entity**

2.2 Complete the Legal Entity Form

Fill in the following fields:

Field	Value
Legal Entity name	Portland Fuel Ltd <i>(use exact registered company name)</i>
Country	United Kingdom
Address	<i>(your registered address)</i>
Postcode	<i>(your postcode)</i>
Contact person — name	<i>(your name)</i>
Contact person — email	steve@portland-fuel.co.uk
Contact person — phone	<i>(your phone number)</i>

Click **Save** (floppy disk icon or Save button).

Part 3 — Create the Substance Dataset

The substance dataset is the core record for HVO. All sections (1.1, 1.2, 1.4, 14) are added to this dataset.

3.1 Navigate to Substances

1. From the main menu, click **Substances**
2. Click + **New** or **Create Substance**

3.2 Set the Substance Name

When prompted:

Field	Value
Substance name	Renewable hydrocarbons (diesel type fraction)

Click **Create** or **Save**.

You are now inside the substance dataset. The left-hand panel shows all available sections (1.1, 1.2, etc.).

Part 4 — Create the Reference Substance

The Reference Substance defines the chemical identity of HVO. It is a separate record that gets linked to Section 1.1.

4.1 Navigate to Reference Substances

1. From the main menu, click **Reference Substances**
2. Click + **New** or **Create Reference Substance**

4.2 Fill in Reference Substance Details

Field	Value
Reference substance name	Renewable hydrocarbons (diesel type fraction)
EC Number	700-571-2
CAS Number	928771-01-1
IUPAC name	Hydrotreated (severe) heavy naphtha — <i>(leave blank if not available; IUPAC name is not mandatory)</i>
Molecular formula	<i>(leave blank — see Remarks below)</i>
Molecular weight	<i>(leave blank — see Remarks below)</i>
Structural formula	<i>(leave blank — see Remarks below)</i>

4.3 Add UVCB Justification to Remarks

This is required to pass validation error **BR122**. Molecular formula/weight/structure cannot be given for a UVCB substance.

Scroll down to find the **Remarks** field (sometimes labelled "Remarks on molecular formula" or a general Remarks field within the reference substance record).

Enter the following text:

HVO (Hydrotreated Vegetable Oil) is a UVCB substance consisting of a complex mixture of paraffinic hydrocarbons in the C10-C20 carbon number range (molecular formula range C10-20 H22-42). A single molecular formula, molecular weight, or structural formula cannot be assigned due to the variable composition inherent in this substance type. Substance identity is established by the boundary composition defined in Section 1.2 and the analytical information in Section 1.4.

Click **Save**.

Part 5 — Section 1.1: General Information

5.1 Open Section 1.1

1. Return to your HVO substance dataset (click **Substances** in the main menu, then click on "Renewable hydrocarbons (diesel type fraction)")
2. In the left-hand section tree, expand **Section 1 — Identification** and click **1.1 Identification**
3. Click + **New** or **Add record** to create a new 1.1 document

5.2 Complete Section 1.1

Field	Value
Substance name	Renewable hydrocarbons (diesel type fraction)
EC number	700-571-2
CAS number	928771-01-1

5.3 Link the Reference Substance

1. In Section 1.1, find the **Reference substance** field or a "Link reference substance" button
2. Click it and search for the reference substance you created in Part 4
3. Select **Renewable hydrocarbons (diesel type fraction)**
4. It should now appear as a linked record

5.4 Set the Legal Entity

1. Within Section 1.1, find the **Legal Entity** field
2. Click it and select **Portland Fuel Ltd** (the record you created in Part 2)

Click **Save**.

Part 6 — Section 1.2: Composition

This section requires two things to pass validation: the correct composition type (BR175) and at least one constituent linked to the reference substance (BR019).

6.1 Open Section 1.2

1. In the section tree, click **1.2 Composition**
2. Click + **New** or **Add record** to create a new composition record

6.2 Set Composition Type

This field is critical — it must be set correctly to pass BR175.

Field	Value
Name/description	HVO — legal entity composition
Type of composition	legal entity composition of the substance
State/form	liquid
Physical state	liquid

6.3 Add a Constituent

Scroll down within the composition record to the **Constituents** section.

1. Click + **Add** or + **New constituent**
2. A new constituent row appears

For the constituent:

Field	Value
Reference substance	<i>(search for and select)</i> Renewable hydrocarbons (diesel type fraction)
Typical concentration	99
Minimum concentration	98
Maximum concentration	100
Units	% (w/w)

For a UVCB substance, you are defining the whole substance as the constituent. The concentration range of 98–100% reflects the pure substance without significant impurities.

6.4 Add an Impurity (Optional but Recommended)

If you have SDS data showing trace impurities, you can add them here. For HVO at inquiry stage this is not required — leave blank if no data is available. The above constituent entry is sufficient to pass validation.

Click **Save**.

Part 7 — Section 1.4: Analytical Information

This section requires at least one record addressing both identification and quantification to pass BR127 and BR228. A single record with the right "Purpose" setting satisfies both errors.

7.1 Open Section 1.4

1. In the section tree, click **1.4 Analytical information**
2. Click + **New** or **Add record**

7.2 Complete the Analytical Record Header

Field	Value
Record name	HVO identity — chromatographic analysis

7.3 Add an Analytical Determination Entry

Within the record, find the **Analytical determination** heading or a repeating block for individual analyses. Click + **Add** to create an entry.

Field	Value
Purpose of analysis	identification and quantification <i>(this single setting satisfies both BR127 and BR228)</i>
Analysis type	chromatography
Analytical method	GC (gas chromatography)

7.4 Handle Results — Use Existing Data Justification

Since you are relying on supplier SDS data rather than conducting new tests, use the "no results" justification route:

Field	Value
Rationale for no results	existing data (select from dropdown)
Justification	See text below

Enter the following in the Justification field:

Substance identity and composition are established by reference to existing supplier Safety Data Sheet data. The Phillips 66 Renewable Diesel SDS (February 2024) contains GC chromatographic analysis confirming C15-C18 isoalkane-predominant composition, total aromatics <1.0% by weight, zero sulphur content, and zero FAME content (fatty acid methyl esters). This is consistent with EC 700-571-2 registered under UK REACH number UK-01-9638319484-0-0004. Full analytical package is held by the Lead Registrant. Portland Fuel will obtain access to this data via a Letter of Access upon joining the consortium.

Click **Save**.

Part 8 — Section 14: Inquiry

This section is where the Article 26 inquiry type is formally declared. All three Section 14 validation errors (BR232, BR086, BR167) are resolved here.

8.1 Open Section 14

1. In the section tree, scroll down to **Section 14 — Inquiry**
2. You should see an existing inquiry document named something like **Inquiry.001** — if so, click to open and edit it
3. If no document exists, click + **New** to create one

8.2 Set the Type of Inquiry

This is the critical field — selecting the wrong type (or leaving it blank) causes BR232 and BR086.

Field	Value
Type of inquiry	Type 1

What Type 1 means: This is a standard new-registrant inquiry. Portland Fuel has not previously registered this substance and is not increasing a tonnage band. Type 1 is the correct choice.

- Type 2 would require a written justification (not applicable here)
- Type 4 is for tonnage band increases (not applicable here)

8.3 Set New Studies Required

Field	Value
Information requirements requiring new studies to be conducted?	No

As Portland Fuel will be joining an existing joint registration and referencing the consortium's data via a Letter of Access, no new studies are required.

After selecting "No": scroll down and confirm that **no individual study types** are ticked as "Yes" under any "New studies to be conducted" sub-section. All should be blank or "No".

8.4 Substance Reference in Section 14

Some versions of IUCLID ask you to confirm the substance you are inquiring about within Section 14. If this field is present:

Field	Value
Substance	Renewable hydrocarbons (diesel type fraction)
EC Number	700-571-2
Tonnage band for inquiry	10–100 tonnes per year

Click **Save**.

Part 9 — Run Validation Before Export

Before exporting the dossier, run IUCLID's built-in validation to confirm all errors are resolved.

9.1 Run the Validation Assistant

1. From within the substance dataset, find the **Validation Assistant** option — typically under a **Tools** menu or a shield/checkmark icon in the toolbar
2. Click **Validate** or **Run validation**
3. Wait for the report to generate

9.2 Interpret the Results

Result type	Meaning
FAILURE (red)	Must be fixed — dossier will be rejected if submitted
WARNING (amber)	Recommended to address but will not block submission for an inquiry
INFO (blue)	Informational only — no action required

All 8 FAILURE errors from the original validation should now be resolved. If any FAILURE errors remain, refer to the troubleshooting section at the end of this guide.

Part 10 — Create and Export the Inquiry Dossier

10.1 Initiate Dossier Creation

1. From within the substance dataset, click **Create Dossier** (document/briefcase icon, or found under the **Actions** menu)
2. The dossier creation wizard opens

10.2 Select Dossier Type

Field	Value
Dossier type	Inquiry
Submission type	UK REACH

If "Inquiry" is not available as a dossier type, your Working Context is not set to UK REACH. Go back to the top-right corner and switch context, then retry.

10.3 Use Advanced Options — Include Legal Entity

This is a GB REACH-specific requirement and is **not the default** — skipping this step means the submission portal will be unable to process the dossier.

1. Look for an **Advanced** button or **Advanced Options** checkbox in the dossier creation wizard
2. Click it to expand advanced settings
3. Find the option "**Include Legal Entity**" and tick it
4. Confirm that Portland Fuel Ltd is selected as the Legal Entity to include

10.4 Complete and Export

1. Give the dossier a name, e.g.: `Portland_Fuel_HV0_Article26_Inquiry_2026`
2. Click **Create** or **Finish**
3. IUCLID will generate the dossier — this may take a few seconds
4. When complete, click **Export** or **Download**
5. The file will download as a `.i6z` file
6. Save it to a known location on your computer (e.g., Desktop or a REACH project folder)

Part 11 — Submit via the Comply with UK REACH Portal

11.1 Log In to the Portal

1. Go to comply-chemical-regulations.service.gov.uk
2. Sign in using your **Government Gateway** credentials
3. On first use, complete the Defra account setup for Portland Fuel

11.2 Start a New Submission

1. From the portal dashboard, click **New submission** or **Start a registration**
2. Select **Inquiry** as the submission type (if prompted)
3. When prompted to upload a dossier, select the `.i6z` file you exported from IUCLID

11.3 Complete and Submit

1. Review the submission summary on screen
2. Confirm all details are correct
3. Click **Submit**
4. **Note the submission reference number** shown on the confirmation screen — keep this for your records
5. You will receive an email acknowledgement to steve@portland-fuel.co.uk

What Happens Next

Timeframe	What happens
Immediately	Email acknowledgement from HSE/Defra
Up to 15 working days	HSE processes the inquiry
On completion	Your inquiry number is issued; Lead Registrant identity visible in portal; your contact details shared with existing registrants
After receiving response	Contact the Lead Registrant to discuss consortium membership and Letter of Access terms

Troubleshooting — Remaining Validation Failures

Error code	Likely remaining cause	Fix
BR122	Remarks text not saved	Re-open Reference Substance, confirm text is in Remarks, save again
BR175	Type of composition field still not set	Open 1.2 record, check dropdown shows "legal entity composition of the substance"
BR019	Constituent saved without Reference Substance link	Re-open constituent row, use the link icon to attach the Reference Substance
BR127 / BR228	Purpose of analysis not saved as "identification and quantification"	Re-open 1.4 record, check the Purpose dropdown value
BR232 / BR086	Section 14 document not saved	Re-open Inquiry.001, confirm Type 1 selected, click Save
BR167	New studies field left blank	Set explicitly to "No" — blank and "No" are not the same in IUCLID
"Create Dossier" unavailable	Working Context is wrong	Top-right corner — switch to UK REACH
Portal rejects .i6z	Legal entity not included in export	Re-export using advanced options with "include legal entity" ticked

Key Reference Data (Pre-Filled for HVO)

Field	Value
Substance name	Renewable hydrocarbons (diesel type fraction)
EC Number	700-571-2
CAS Number	928771-01-1
Substance type	UVCB
Existing UK REACH reg	UK-01-9638319484-0-0004
Tonnage band	10–100 tonnes/year
Inquiry type	Type 1
New studies required	No
Company contact	steve@portland-fuel.co.uk
HSE IT Support	ukreachitsupport@defra.gov.uk
Comply with UK REACH portal	comply-chemical-regulations.service.gov.uk
IUCLID 6 Cloud	iuclid6.echa.europa.eu
